

ABSTRACT OF THE DISCLOSURE

An audio system is provided which can easily register title information in a medium capable of recording music data and the like. A recording/reproducing apparatus transmits TOC information for identifying a CD

5 to be reproduced, to a personal computer. Upon reception of this TOC information, the personal computer communicates with a management site for managing disk information of CD's via a network, and receives subject disk information from the management site by using the TOC information. Thereafter, the recording/reproducing apparatus started the record operation 10 transmits record completion information to the personal computer when a record of music data is completed. Upon reception of this record completion information, the personal computer transmits title information (such as a track title) corresponding to the record completion information to the recording/reproducing apparatus. The recording/reproducing apparatus 15 registers the received title information in an MD recorded with the music data.
